Projects

Movie search application via React　　　　　　　　　　　　　　　Jun '20 - Jun '20

- GitHub | Live
- Set the **Movies** to be an empty object by default in order to avoid getting any errors in the MovieCard component
- Added the fetch call to make an API call to the endpoint & retrieve data.
- Provided a form with an **input** that will be used by users to submit a search term and display results in a list of **MovieCard**'s
- Deployed **flexbox, grids** to position items and **clip-path** to make unique UI elements while adding **media** queries for mobile application.

BaloonMania　　　　　　　　　　　　　　　　　　　　　　　　Aug '20 - Aug '20

- GitHub | Live
- Used JavaScript DOM manipulations and event Delegation model for the game to perform well.
- Utilized **media queries** technique for delivering a tailored style sheet to different devices.
- Deployed **Bootstrap** to automatically scale web page to mobile & configured images to have a specific width on the page.
